

”

The training was really clear and exhaustive... The instructor (name removed) did an amazing job thoroughly explaining and illustrating the different features of the software. The instructor is an excellent expert in reliability field and communicates his competences to the training participants...

”

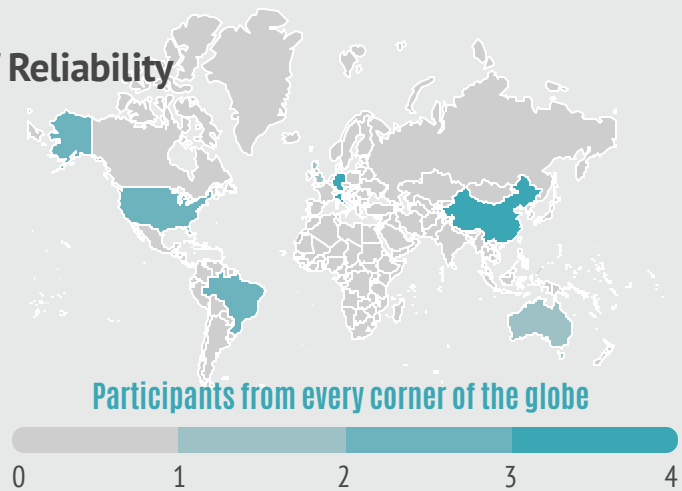

Worldwide training in reliability engineering & advanced ALT & system analysis

Tecram Srls was selected to provide a global training programme for 20+ reliability engineers in advanced accelerated life testing and system analysis to a group of 20+ reliability engineers from a number of R&D and Testing Division of the Electrolux Group.

Liaising directly with the Forlì division of Electrolux, Tecram's engineer developed two advanced reliability modules:

- advanced accelerated life testing module
- advanced RBD and Fault Tree analysis.

HBK course RSW250 Fundamentals of Reliability

As the audience included participants from EMEA, Asia-Pacific and North/South America region, the advanced material was developed in English language and was presented subsequently to the teaching of the HBK foundation course RS250: Fundamentals of Reliability.

Advanced system analysis and accelerated life testing

The advanced module developed by Tecram's engineer were the result of a close collaboration with Electrolux to ensure that only the most relevant part of Fault Tree and RBD analysis as well as accelerated life testing were explored and fully developed.

Over 300 hours of development resulting in an additional 150 slides with theory, case studies and exercises supported by the ReliaSoft Weibull++, Accelerated Life Testing add-on module and BlockSim for Fault Tree and RBD analysis. Each training session which consisted of 9 slots of 3 hours each was delivered via Zoom to three geographically compatible groups.

A program of support subsequent to the training is ongoing in the area of data analysis and accelerated testing.
