

Reliability @ Tecram

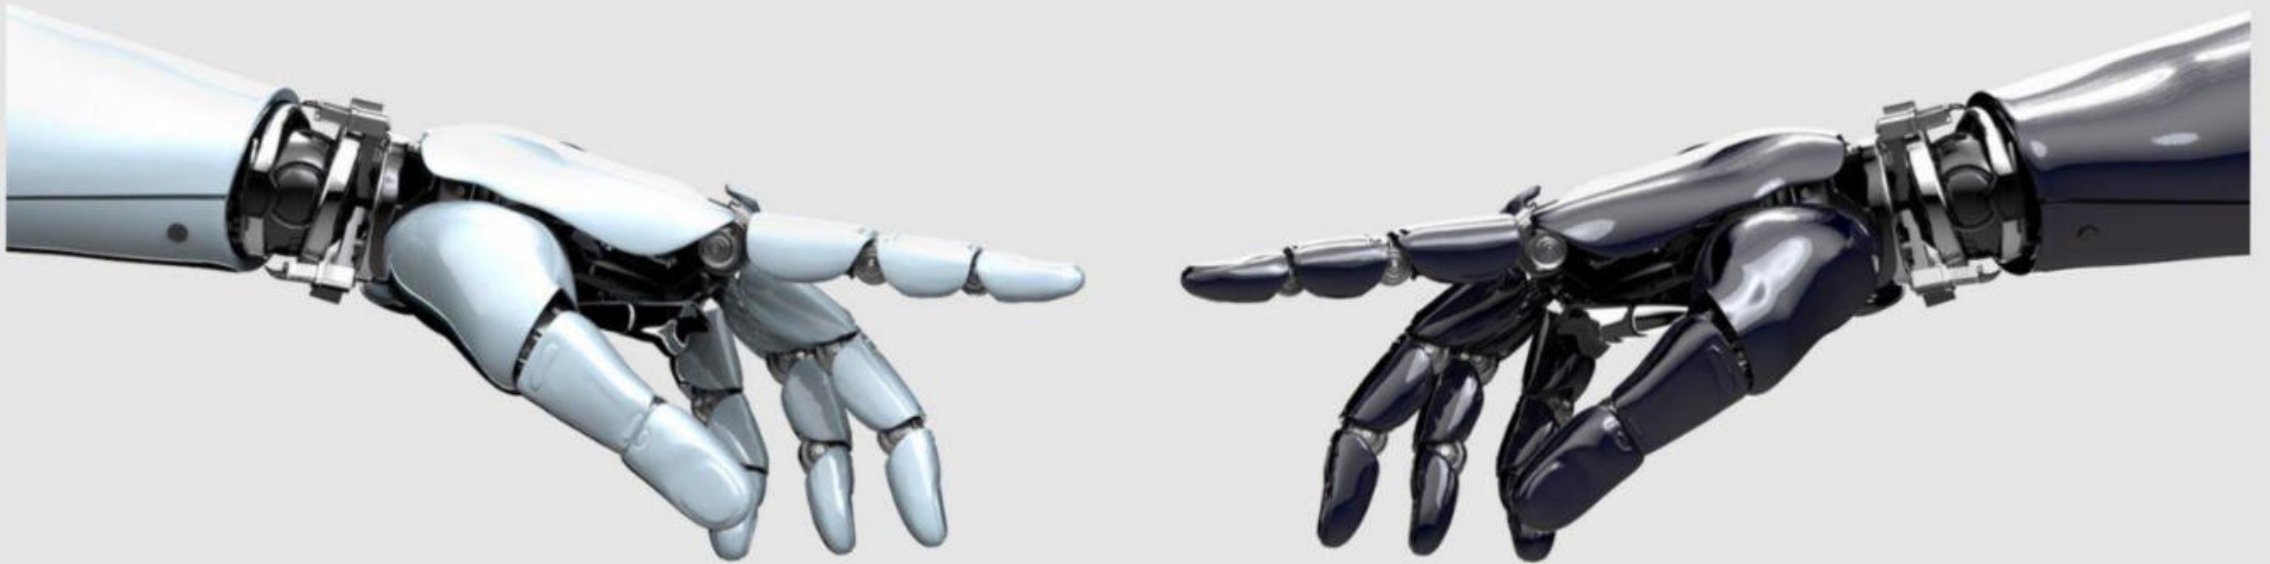

Intro

Reliability is probably one of the most critical aspects of a product no matter how old your product is and at Tecram we recognise the importance of empowering the reliability professionals.

Solutions

Tecram is able to support organisations both in the sales and training of ReliaSoft state of the art reliability software and in custom developed training solutions. In addition, are engineers can support your organisation in reliability projects from specific analysis to complex multi-stage Design for Reliability process.

Medical Technology

We supply software to various medical manufacturer and train their engineers to be better prepared for the 21st century's challenges.

Agriculture and Bio-Technology

At Tecram we have carried out consultancy project in the agro-tech world. FMEA, warranty analysis and accelerated testing that can make your company strengthen its position on a competitive market.

Energy and Power Technology

This world is rapidly changing and what better way to embrace this challenge with producing a reliable solution. At Tecram we have experience of running specific training for companies operating in this sector.

Information Technology

Datacenter are critical infrastructure with their system availability extremely small and difficult to correctly estimate. At Tecram we master the power of ReliaSoft BlockSim to fully characterise the dynamic behaviour of the installation.

Communication Technology

Satellite communication is extremely challenging to model but our knowledge of reliability engineering combined with your knowledge of satellite technology creates a perfect match where failures are not an option.

Transportation Technology

No matter on whether the transport is on rails, on road or at sea, at Tecram we provide instruments capable of analysing your problems and help you in your decision making process.

Manufacturing Technology

If your tool is a hammer, then every problem will look like a nail. That's why at Tecram we provide a range of ReliaSoft instruments to address your manufacturing's concern. Whether it being failure analysis or design of experiment or complex maintainability modelling, we have a solution.

Next step

Find out more how Tecram can provide the adequate support to your organisation in the field of life data analysis, design of experiment, accelerated testing, reliability growth, system reliability and maintainability analysis and FMEA and RCM.
