

Reliability consulting services for system analysis

Airworks Srl has selected Tecram Srls to supply [ReliaSoft BlockSim](#) state of the art RBD and Fault Tree analysis software for reliability and maintainability analysis. Tecram was recommended for providing online consulting services in the area of complex system analysis using the RBD interface. With an effective online programme aimed first at familiarising with the extensive RBD interface present in BlockSim and subsequently develop the system and address specific problems relating to the extrapolation of the data and the interpretation of the results.

Online consultancy

Comprehensive online support provided by Tecram to help Airworks' engineers to familiarise with the RBD and Fault Tree interface

Top qualified instructors

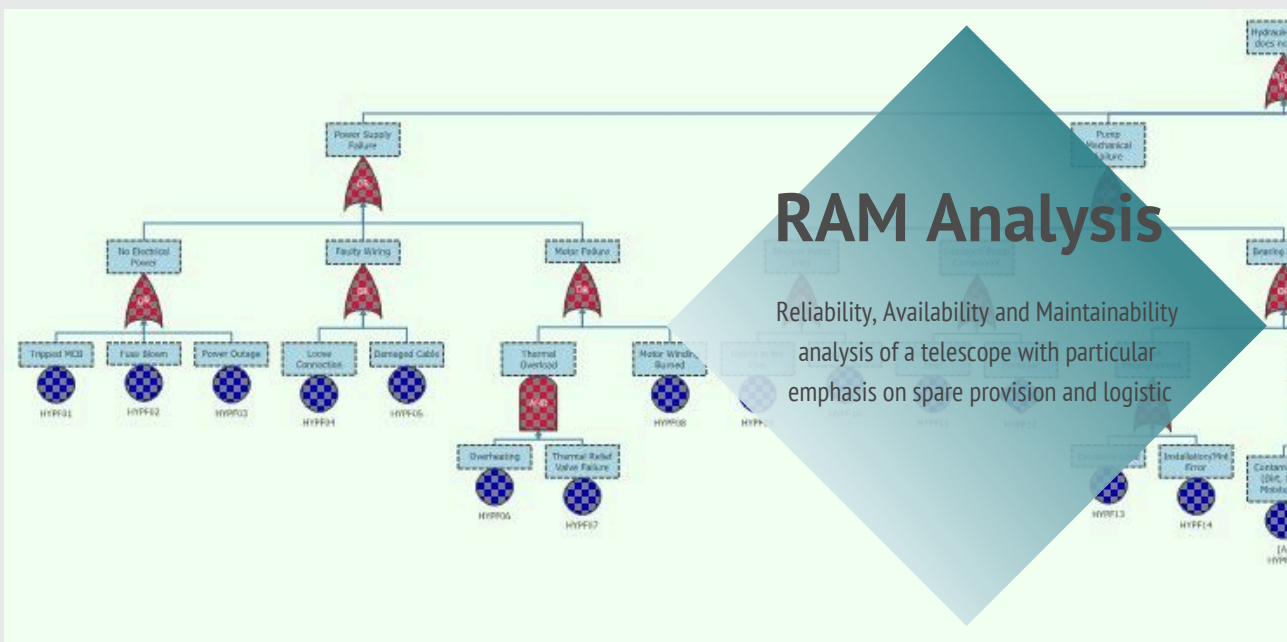

Tecram has HBK Prensca's qualified instructors in the field of reliability and maintainability analysis with a vast experience in BlockSim.

Cost-effective solution

A very cost-effective solution for training and project work helping the customer developing a solution in a timely and constructive manner.

RBD and FT analysis of a telescope
